Jack Stehn

Data & Analytics Engineer

San Francisco, California • jack.stehn@protonmail.com • www.linkedin.com/in/jack-stehn • github.com/jstehn • greenwolf.me

PROFESSIONAL SUMMARY

Data & Analytics Engineer who builds the pipelines, warehouses, and models that turn messy, multi-system data into numbers people trust. I've designed modern data stacks (Dagster, dbt, dlt, BigQuery) end to end, from ingestion and data quality checks to dashboards and production ML, with a software engineering mindset: CI/CD, testing, and modular design.

EXPERIENCE

Data Engineer / Customer Delivery Engineer (Contract)

Mar 2026 — Sep 2026

Innovare

- **K-12 Student Data Quality:** Worked across school partners' student data, including assessment scores, grades, and attendance. Validated it end to end, from source systems to final reports, and wrote automated data tests to catch errors before they reached educators.
- **Customer Data Verification Tool:** Built a tool for the Customer Success team to verify that incoming customer data loaded correctly, and wrote a guide so they could run it on their own.
- **Pipeline Reliability:** Owned the stability and scalability of production data pipelines feeding high-stakes EdTech dashboards, ensuring datasets stayed accurate and auditable for enterprise school district customers.
- **Medallion Architecture Design:** Helped design a transition to a Medallion (bronze/silver/gold) data architecture on BigQuery, defining layer contracts, freshness SLAs, and lineage to improve traceability and downstream analytics velocity.
- **Modern Stack Advocacy:** Proposed adopting Terraform (IaC), dlt (ingestion), dbt (transformation), Dagster (orchestration), Cube.js (semantic layer) to replace ad-hoc workflows — enabling version control, automated testing, and unified observability across the platform.
- **Workflow Automation:** Replaced manual customer delivery workflows with automated, idempotent pipelines, reducing turnaround time and eliminating recurring sources of data drift between systems.

Data Scientist (Lead: Data Engineering, MLOps) - Ed Pioneers Fellow

Sep 2024 — Oct 2025

Caliber Public Schools

- **Modern Data Stack Architecture:** Architected and built a scalable platform on GCP. Orchestrated ELT pipelines using Dagster, dbt, and dlt to ingest data from disparate SIS (School Information Systems) and HR platforms into BigQuery.
- **Engineering Maturity (ROI):** Engineered a comprehensive People Team data pipeline, reducing manual consistency checks from months of collective annual work to seconds. Built a custom automated data quality framework to catch inconsistencies between systems.
- **API Integration & Interoperability:** Solved complex data interoperability challenges by designing integrations between Schoolmint and PowerSchool. Reverse-engineered undocumented APIs to create a unified data model for cross-functional analysis.
- **Solo Data Lead:** As the sole data professional, partnered with the C-suite to move the org from manual spreadsheets to automated warehousing.
- **Predictive Modeling:** Built and deployed an explainable staff-turnover model (Logistic Regression, Deep Learning) with a tunable risk threshold so leadership could match precision/recall to hiring capacity.

Data Scientist (Data Engineering, MLOps)

Aug 2021 — Feb 2023

SetSail

- **Pipeline Architecture (AWS):** Led a critical overhaul of the AWS data infrastructure (S3, Athena, EMR). Implemented 'SQL Push-down' strategies and asynchronous DAGs, reducing data processing latency by 75% and scaling to multi-terabyte datasets.
- **Scalable Data Modeling:** Architected Star Schema data models and optimized ETL/ELT, readying data for ML and LLM integration.
- **Engineering Best Practices:** Championed the adoption of CI/CD pipelines (GitHub Actions), unit testing (pytest), and Agile methodologies within the data science team.
- **Business Impact:** Infrastructure work contributed to 33% faster ramp times, 16% higher revenue, and 15x customer ROI.
- **Production ML:** Developed and deployed propensity scoring and churn models, using NLP on unstructured email metadata to surface sales signals.

EDUCATION

University of California, Berkeley

Aug 2019 — May 2021

Bachelor of Arts in Data Science (Domain Emphasis: Quantitative Social Science)

GPA: 4.00/4.00

Highest Distinction (Summa cum laude). Outstanding Data Science Undergraduate Award (Top of Class).
